Preface *xvii*

Acknowledgments *xix*

Abbreviations *xxiii*

1 Climatology of the Tropical Atmosphere and Upper Ocean *1*

1.1 The Growth of Tropical Meteorology *1*

1.2 Seasonal Characteristics *4*

1.2.1 Zonal Variability *5*

1.2.1.1 Sea–Surface Temperature *5*

1.2.1.2 Temperature and Humidity *5*

1.2.1.3 Precipitation *6*

1.2.1.4 Wind Fields *7*

1.2.2 Spatial Variability in the Tropics *8*

1.2.2.1 Surface Temperature *8*

1.2.2.2 Precipitation *9*

1.2.2.3 Surface Pressure *11*

1.2.2.4 Wind Fields *12*

1.2.2.5 Moisture Flux *13*

1.2.3 Variability Along the Equator *14*

1.2.3.1 Temperature and Moisture *14*

1.2.3.2 Wind Fields *15*

1.3 Macro-Scale Circulations *16*

1.3.1 Hadley’s Circulation *16*

1.3.2 Walker’s Circulation *17*

1.3.3 Monsoon Circulations *19*

1.3.3.1 Asian–Australasian Monsoons *20*

1.3.3.2 Monsoons of the Americas *22*

1.3.3.3 African Monsoon *23*

1.3.4 Large-Scale Characteristics of Tropical Oceans *23*

1.4 A Myriad of Variability *24*

1.4.1 High-Frequency Variability *24*

1.4.1.1 Waves in the Easterlies *25*

1.4.1.2 Tropical Cyclones and Monsoon Depressions *26*

1.4.1.3 The “Great Cloud Bands” *29*

1.4.1.4 Mesoscale Convective Systems *29*

1.4.2 Subseasonal Variability *29*

1.4.3 Interannual Variability *31*

1.4.3.1 El Niño and the Southern Oscillation *31*

1.4.3.2 Atlantic Oscillations *32*

1.4.3.3 Stratospheric Oscillations *33*

1.4.4	Overlapping of Variance Bands: Waves Within Waves	33
	Notes	34
2	Hydrological and Heat Exchange Processes	37
2.1	Water on Earth	38
2.1.1	An Inventory	38
2.1.2	Global Disposition of Rainfall	39
2.2	Thermodynamics of Water and Earth's Climate	39
2.2.1	Implications of Clausius–Clapeyron	40
2.2.2	Role of Water in the Evolution of Earth's Climate	41
2.2.3	Estimate of the Planetary Radiative Surface Temperature	42
2.3	Water and the Tropical System	43
2.3.1	Atmosphere	43
2.3.1.1	Clausius–Clapeyron and the Vertical Profiles of Temperature and Humidity	43
2.3.1.2	Distribution of Water Vapor and Liquid/Ice Water	44
2.3.1.3	Moisture, Lapse Rates and Gradients of Atmospheric Buoyancy	45
2.3.2	Ocean	46
2.3.2.1	Ocean Surface Layer: Warm and Fresh	49
2.3.2.2	Abyssal Water: Cold and Saline	49
2.3.2.3	The Thermocline	50
2.4	Buoyancy, Differential Buoyancy, and the Generation of Horizontal Body Forces	50
2.4.1	Concept of Buoyancy	50
2.4.2	Zonal Variability of Buoyancy Induced by Radiative Forcing	51
2.4.3	Poleward Heat Transport	51
2.5	Integrated Column Heating	53
2.5.1	Components of Total Heating	53
2.5.2	Latitudinal Distribution of Latent Heat Flux and Condensational Heating	54
2.5.3	Latitudinal Distributions of Total Columnar Heating	55
2.5.4	Longitudinal Disposition of Total Columnar Heating	56
2.5.5	Annual Cycle of Total Columnar Heating	56
2.6	Buoyancy in the Tropical Ocean	57
2.6.1	Net Heating of the Upper Ocean	58
2.6.2	Fresh Water Flux into the Tropical Ocean	59
2.6.3	Distribution of Ocean \overline{F}_B Buoyancy Flux	59
2.6.4	Observations of Ocean–Atmosphere Fluxes in the Tropics	61
2.6.4.1	Western Pacific Ocean Circulation Experiment (WEPOCS)	61
2.6.4.2	Surface Fluxes in the Bay of Bengal During JASMINE	63
2.7	Translations to the Broader Scale	66
2.7.1	Large-Scale Columnar Heating Gradients	66
2.7.2	Upper-Ocean Heating	68
2.8	Convection–SST Relationships and the Vertical Scale of Tropical Motions	68
2.9	Coupled Global Ocean–Atmosphere Synergies	70
2.9.1	The Notion of Interactive Zones	70
2.9.2	A Stable Global Interactive System	71
2.9.2.1	The Tropical Circulation	71
2.9.2.2	State of the Stratosphere	72
2.9.2.3	The Return Atmospheric Flow Between the Tropics and the Poles	72
2.9.2.4	The Polar Ocean–Atmosphere Interface and the Formation of Deep Water	72
2.9.2.5	The Return Ocean Flow Between the Poles and the Equator	73
2.9.2.6	Maintenance of the Warm Pool	73
2.10	Synthesis	73
	Notes	73

3	Fundamental Processes	77
3.1	Some Fundamentals of Low-Latitude Atmospheric Dynamics	79
3.1.1	Basic Equations	79
3.1.2	Scaling Atmospheric Motions in the Tropics	80
3.1.2.1	Is the Tropical Atmosphere Hydrostatic?	81
3.1.2.2	A Consequence of Making the Hydrostatic Assumption: Total Kinetic Energy and the “Traditional Approximation”	82
3.1.2.3	Scaling Thermodynamic Variability in the Tropics	83
3.1.3	Early Interpretations	84
3.1.4	Conundrums	86
3.1.4.1	Hypothesis I: Tropical Convection Is Driven by Extratropical Forcing	86
3.1.4.2	Hypothesis II: Convection Occurs Because of Reduced Static Stability in Regions of Convection	86
3.1.5	Geostrophic Adjustment in the Low-Latitude Atmosphere	87
3.1.5.1	Rossby Radius of Deformation (R)	87
3.1.5.2	Inertial Motion	88
3.1.5.3	Rotational or Buoyancy Waves?	89
3.1.5.4	Heating and Tropical Circulations	90
3.1.6	Overview	90
3.2	Dynamics of the Low-Latitude Upper Ocean	91
3.2.1	Scales of Motion	91
3.2.2	Geostrophic Adjustment in the Low-Latitude Ocean	93
3.2.3	Sverdrup Wind-Driven Transport	95
3.2.4	Ekman Transports	96
3.2.4.1	Formulation	96
3.2.4.2	Why Is the Total Integrated Ekman Transport Orthogonal to the Surface Wind?	97
3.2.5	Induced Geostrophic Currents	98
3.2.6	Low-Latitude Wind-Driven Currents	99
3.2.6.1	Global Wind-Stress Fields and Surface Current Climatology	99
3.2.6.2	Geostrophic Currents	100
3.2.6.3	Currents and Counter-Currents	101
3.2.6.4	Equatorial Undercurrents	101
3.2.7	Overview	103
	Notes	104
4	Kinematics of Equatorial Waves	107
4.1	Phase and Group Velocities, and Energy Propagation	107
4.1.1	Wave Characteristics in a Quiescent Basic State	107
4.1.1.1	Golf Ball in a Pond	107
4.1.1.2	Analysis of the Perturbation in the Pond	108
4.1.2	Kinematic Relationships Between Waves and Their Background Basic State	109
4.1.2.1	General Wave Kinematics in a Variable Basic Flow	110
4.1.2.2	Dispersion of Energy Away from a Source	111
4.1.2.3	Dispersion in a Quiescent or Constant Basic State	111
4.1.2.4	Constant Basic State	111
4.2	Dispersive and Non-dispersive Waves	111
4.3	Overview	112
	Notes	113
5	Fundamental Prototypes of Tropical Systems	115
5.1	The Laplace Shallow Fluid System	115
5.1.1	Governing Equations	115
5.1.1.1	Use the Equatorial β -Plane Approximation	115

5.1.1.2	Define Total Depth of the Fluid and the Background Basic State	116
5.1.1.3	Integrate the System in the Vertical	116
5.1.1.4	Linearization of the System	116
5.1.2	Doppler and Non-Doppler Effects	117
5.1.3	Equatorial Wave Equation	117
5.2	Upper Ocean	118
5.2.1	Governing Equations	118
5.2.2	Ocean Wave Equation	119
5.3	A Stratified Atmospheric Model	119
5.3.1	Separation of Variables	120
5.3.2	Basic Equations	120
5.3.3	Coupled Horizontal and Vertical Structure Equations	120
5.4	Forced and Free Solutions and the Choice of \bar{H}	121
5.5	Some Remarks	123
	Notes	123
6	Equatorial Waves in Simple Flows	125
6.1	Atmospheric Modes in a Constant Basic State: Constant \bar{U}	125
6.1.1	Governing Equations for a Motionless Basic State ($\bar{U} = 0$)	125
6.1.2	Governing Equations for a Constant Basic State ($\bar{U} = \text{Constant}$)	125
6.1.3	General Dispersion Relationship for a Constant Basic State ($\bar{U} = \text{Constant}$)	126
6.1.4	Eigenfrequencies for a Constant Basic State	127
6.1.4.1	Dispersion Diagrams	127
6.1.4.2	The Ubiquitous Nature of MRG and K Waves	128
6.1.4.3	Eigenfrequency Dependence on \bar{H}	129
6.1.5	Eigensolutions	129
6.1.5.1	Equatorial Rossby Waves (ER)	129
6.1.5.2	Inertia-Gravity Waves (WIG, IG)	137
6.1.5.3	Mixed Rossby-Gravity Wave (MRG)	139
6.1.5.4	The Kelvin Wave	141
6.2	Atmospheric Waves in Latitudinal Shear Flow: $\bar{U} = \bar{U}(y)$	144
6.2.1	Regions of Shear in the Tropics	144
6.2.2	Impacts of Latitudinal Shear	145
6.2.2.1	Rossby Waves in Shear Flow	146
6.2.2.2	Mixed Rossby-Gravity Wave in Shear Flow	146
6.3	Physics of Equatorial Trapping	146
6.3.1	Simple Potential Vorticity Arguments	147
6.3.2	Induced Relative Vorticity in Simple Basic States	148
6.3.2.1	Motionless Basic State $\bar{U} = 0$	148
6.3.2.2	Constant Non-Zero Basic State ($\bar{U} = \text{constant}$)	149
6.3.2.3	Shear Flow: $\bar{U} = \bar{U}(y)$	150
6.4	Large-Scale Low-Latitude Ocean Modes	151
6.4.1	Simple Model of the Upper Ocean – Geopotential Surfaces	151
6.4.2	Rotational Ocean Waves	152
6.4.3	Impact of Boundaries on Near-Equatorial Ocean Modes	153
6.4.4	The Longwave Approximation	156
6.5	Overview	157
	Notes	158
7	Waves in Longitudinally and Vertically Varying Flows	159
7.1	Horizontal and Vertical Coupling of Equatorial Modes	160
7.1.1	Coupled Group Speeds	160
7.1.2	Coupled Dispersion Relationships and Group Speeds	160

7.1.2.1	Equatorial Rossby (ER) Waves	160
7.1.2.2	Mixed Rossby-Gravity (MRG) Wave	162
7.1.2.3	Kelvin Wave	163
7.2	Coupled Free and Forced Solutions of the Vertical Structure Equation	163
7.2.1	Free Solutions	164
7.2.1.1	Isothermal Atmosphere	164
7.2.1.2	Constant Lapse Rate Atmosphere	166
7.2.1.3	Construction of Realistic Temperature Profiles	166
7.2.2	Forced Motions in an Isothermal Atmosphere	166
7.2.2.1	Case 1: External Solutions	168
7.2.2.2	Case 2: Oscillatory Solutions	168
7.3	Wave Characteristics in a Zonally Varying Basic State $\bar{U} = \bar{U}(x)$	169
7.3.1	Rays in the Longitudinal Plane	170
7.3.1.1	Rossby Wave Characteristics	170
7.3.1.2	MRG Wave Characteristics	172
7.3.2	Impact of Longitudinal Displacement of Wave Sources in a Zonally Varying Flow	173
7.3.2.1	Accumulating Modes	174
7.3.2.2	Anomalous Non-accumulating Propagating Mode	174
7.4	Numerical Substantiation of the Analytic Ray-Tracing Results	176
7.4.1	Equatorial Accumulation	176
7.4.2	Equatorial Emanation Regions to Higher Latitudes	177
7.5	Zonally Varying Basic State and the “Longwave Approximation”	181
7.6	Vertical Trapping, Accumulation, and Lateral Emanation	182
7.7	Quasi-Biennial Oscillation (QBO)	183
	Notes	184

8 Moist Processes and Large-Scale Tropical Dynamics 185

8.1	Convection and Large-Scale Budgets	186
8.2	Emerging Perspective on Tropical Convection	188
8.3	Comparison of Observed Waves and Waves from Theory	190
8.3.1	Stratospheric Modes	190
8.3.2	Transient Tropospheric Modes	190
8.3.3	Stationary Modes in the Tropics	191
8.4	Dry and Moist Modes in the Tropics	191
8.5	Processes	193
8.5.1	Convective Dissipation	194
8.5.2	Stability and Convection	196
8.5.3	Surface Flux Feedbacks	197
8.5.4	Convective Instability of the Second Kind: CISK	198
8.5.5	Spatial Variation of the Basic State	199
8.6	Synthesis	201
	Notes	203

9 Extratropical Influence on the Tropics 205

9.1	Lateral Wave Propagation in a Zonally Symmetric Basic State	205
9.2	Equatorial Wave Propagation in a Zonally Varying Basic State	208
9.2.1	Numerical Experiments in a Zonally Varying Basis State	210
9.2.1.1	Weak Equatorial Easterlies (Basic State A)	210
9.2.1.2	Weak Westerly Zone (Basic State B)	210
9.2.1.3	Strong Westerly Zone (Basic State C)	212
9.2.1.4	Latitudinal Distributions of PKE	212
9.2.2	Synthesis	212
9.3	Equatorward Wave Propagation in a Three-Dimensional Basic State	214
9.3.1	Structure of the Mean Fields in the Upper and Lower Troposphere	214

- 9.3.2 Transient Behavior 216
- 9.3.3 One-Point Correlation Fields in the Horizontal Plane 217
- 9.3.4 One-Point Correlation Fields in the Vertical Plane 218
- 9.3.5 Impacts of Extratropical Wave Incursion into the Tropics 219
- 9.4 Overview 221
- Notes 221
- 10 Tropical Influence on the Extratropics: A Zonally Averaged Perspective 223**
 - 10.1 Axisymmetric Meridional Circulation Models 223
 - 10.2 Zonally Averaged Perspective of Meridional Circulations 225
 - 10.2.1 An Atmospheric Zonally Averaged Model 225
 - 10.2.2 Observed Eddy Momentum and Heat Fluxes 226
 - 10.2.3 Eddies and the Mean Circulation 227
 - 10.3 Perspective 230
 - Notes 230
- 11 A Tropical–Extratropical Synergy 231**
 - 11.1 Mean and Transient Potential Vorticity on the 370 K Isentrope 231
 - 11.2 Impermeability 234
 - 11.3 Shallow Fluid Experiments 237
 - 11.3.1 Potential Vorticity Substance in a Shallow Fluid 237
 - 11.3.2 Simulations with “Equatorial” and “Monsoon” Heating 238
 - 11.3.3 Role of PVS Fluxes in Determining the Zonally Averaged Tropical Circulation 239
 - 11.4 Recursively Breaking Rossby Waves 240
 - 11.5 Conclusions 241
 - Notes 243
- 12 Arid and Desert Climates 245**
 - 12.1 Dynamics of Deserts 245
 - 12.2 Radiative and Surface Fluxes 248
 - 12.3 Diurnal Cycle of Divergence 250
 - 12.4 Tropospheric Energy Balance 251
 - 12.5 Nocturnal Stabilization of the Boundary Layer 251
 - 12.5.1 Development of a Nocturnal Desert Jet Stream 251
 - 12.5.2 Dynamics of the Low-Level Nocturnal Jet 251
 - 12.5.3 A Subsiding Lateral Exhaust 254
 - 12.6 Desert–Monsoon Relationships 255
 - Notes 256
- 13 Near-Equatorial Precipitation 257**
 - 13.1 Near-Equatorial Distributions of Precipitation 258
 - 13.1.1 Relationships Between Convection, MSLP, and SST 258
 - 13.1.2 Theories of the Location of Near-Equatorial Convection 260
 - 13.1.2.1 Collocation of Convection and Maximum SST 260
 - 13.1.2.2 Locus of Near-Equatorial Disturbances 261
 - 13.1.2.3 Zonally Symmetric Arguments 261
 - 13.1.2.4 Dynamic–Thermodynamic Optimization and Feedbacks 261
 - 13.1.2.5 Coupled Ocean–Atmosphere Explanations 262
 - 13.2 Dynamic Instabilities Associated with a Cross-Equatorial Pressure Gradient 262
 - 13.2.1 Distributions of Absolute Vorticity 263
 - 13.2.2 Geophysical Context for Inertial Instability 265
 - 13.2.3 Concept of “Perpetual” Instability 266
 - 13.2.4 Near-Equatorial Inertial Instability 268
 - 13.2.5 Processes Determining the Distribution of Absolute Vorticity 270

13.2.6	Vertical and Latitudinal Structures	272
13.2.7	Is the Existence of a CEPG a Sufficient Condition for Inertial Instability?	273
13.2.8	Dynamic Estimate of the Latitude of the Mean ITCZ in Regions of Strong CEPG	275
13.2.9	Low-Level Near-Equatorial Westerlies in Regions of Strong CEPG	276
13.2.10	A Potential Vorticity View of Ameliorating Secondary Circulations	278
13.3	Transient States of the Intertropical Convergence Zone	280
13.3.1	Character of the Transients	281
13.3.2	Transient Composites	284
13.3.3	Diagnostics of ITCZ Transients	288
13.3.4	Origin of “Easterly Waves”	289
13.4	The Great Cloud Bands	290
13.4.1	Climatology of the GCBs	291
13.4.2	Variability within the GCBs	291
13.4.3	Theories of the Formation, Location, and Orientation of the GCBs	292
13.4.3.1	Anchoring	292
13.4.3.2	Orientation of the GCBs	292
13.4.3.3	Continental and Orographic Forcing	295
13.4.4	High-Frequency Variance in the GCBs	295
13.5	Some Conclusions	298
	Notes	299

17.2.2	Changes in Ocean Heat Storage	413
17.2.3	Spatial and Temporal Variability of Ocean Heat Flux	413
17.3	Do Ocean Heat Fluxes Regulate the Annual Cycle of the Monsoon?	415
17.3.1	Balanced Interhemispheric Heat Fluxes	415
17.3.2	Cross-Equatorial Ocean Ekman Heat Transport	415
17.4	Variability Within the Coupled Monsoon System	416
17.4.1	Biennial Variability	416
17.4.1.1	Ocean-Atmosphere Feedbacks	417
17.4.1.2	Pacific Warm Pool Seasonal Cycle Instability	418
17.4.1.3	Indian Ocean Feedbacks I, The Meehl Theory	418
17.4.1.4	Indian Ocean Feedbacks II: A Dynamic Ocean	419
17.4.1.5	ENSO and Internal Dynamics	419
17.4.2	Intraseasonal Variability in the Indian Ocean	421
17.5	An Holistic View of the Monsoon System	421
17.5.1	Indian Ocean Sector	422
17.5.2	Speculations on the Interaction of the Indian and Pacific Ocean Sectors	424
	Notes	428
18	The Changing Tropics	429
18.1	Tropical Warm Pool	429
18.1.1	Changes in the Ocean Warm Pool During Last Century	429
18.1.2	The Mid-Twentieth Century SST Plateau	430
18.1.3	Longer-Term Changes in the Tropical SST	431
18.1.4	Relationship Between SST and Convection in the OWP	432
18.1.4.1	Surface Energy Balance Regulation	433
18.1.4.2	Cloud-Radiation Feedbacks	433
18.1.4.3	Ocean Feedbacks	433
18.1.5	SST and Column Integrated Heating (CIH)	433
18.1.6	Why Is the Area of Organized Convection Relatively Constant?	435
18.2	Circulation Changes	438
18.2.1	Definition of a Broad-Scale Monsoon System	438
18.2.2	Variability and Trends of the Northern Hemisphere Monsoon System	439

18.2.3	Why Has the Northern Hemisphere Monsoon System Intensified?	441
18.3	Summary and Conclusions	442
	Notes	444
19	Some Concluding Remarks	445
	Notes	447
Appendix A	Thermal Wind Relationship	449
Appendix B	Stokes' Theorem	451
Appendix C	Dry and Moist Thermodynamical Stability	453
Appendix D	Derivation of the Wave Equation (5.11)	455
Appendix E	Conservation of Potential Vorticity of Shallow Water System	457
Appendix F	Solutions to the Vertical Structure Equation for a Constant Lapse Rate Atmosphere	459
Appendix G	Nonlinear Numerical Model	461
Appendix H	Derivation of the Potential Vorticity Equation on an Extratropical β-Plane	463
Appendix I	Derivation of the Barotropic Potential Vorticity Equation (13.25) with Friction and Heating	465
Appendix J	Steady State Model of the Tropics	467
Appendix K	Intermediate Ocean Model	469
